FOOTBALL GEAR EVOLUTION

2003 / Following the Riddell Revolution, Schutt introduces the DNA. Both are designed to lessen concussions. The interior pads shown are shock-absorbing and are not made of the same foam materials used in older helmets.

Cool compressed air enters the pad then flows through vertical air flow channels that are open to the chest and back of the player

FOOTBALL GEAR EVOLUTION

Introduced in 2002, Impact shoulder pads replaced the traditional foam padding with a gel-like material that makes the pads lighter and also helps keep players cool.
